Product Agility Checklist

Agile product gives you the ability to validate your assumptions quickly and change direction if needed. You can focus on items that are adding biggest value now. Basing on following checklist you can identify the engineering areas that are most important to you.

Please answer following sentences with a number:

0 – Never; 1 - Very rarely; 2 – Sometimes; 3 – Usually; 4 - Very often; 5 - Always

Sentence:	Points
1. We can go to production with every single feature implemented	
2. There are no surprises during release day	
3. We release regularly and frequently	
4. There are no defects on production	
5. We don't spent time on maintenance (testing, debugging and bugfixing)	
6. We can add new functionality easily and quickly	
7. Adding a new feature is as easy as it was a year ago	
8. High quality and low complexity of our code let us create more predictable plans	
9. We can change direction easily when needed	
10. It's fun to develop our product	
Sum:	

The lower the score is, the more you need to invest into Agile Engineering Environment and Practices. of your product.

Score of 0-10 basically means your product is almost dead. Score of 41-50 means you're deploying best-of-art practices.
